Performance data shown represents past performance and is no guarantee of future results. Current performance may be higher or lower than the performance shown. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. To obtain performance data current to the most recent month-end, visit dimensional.com. Dimensional flagship equity mutual funds include funds with at least 20 years of performance, excluding VA funds and non-US regional small cap funds. The current value of a hypothetical \$100,000 investment is reported net of all advisory fees and expenses and includes reinvestment of dividends and other earnings. The initial investment may be higher or lower than the initial amount required to invest in each fund. The performance of an index is not an exact representation of any particular investment, as you cannot invest directly in an index. All MSCI indices are net dividends.

Mutual fund investment risks include loss of principal and fluctuating value. Small cap securities are subject to greater volatility than those in other asset categories. Value investing is subject to risk that may cause underperformance compared to other equity investment strategies. International investing involves special risks, such as currency fluctuation and political instability. Investing in emerging markets may accentuate these risks. Real estate investing risks include changes in real estate values and property taxes, interest rates, cash flow of underlying real estate assets, supply and demand, and the management skill and creditworthiness of the issuer. Risks specific to each fund are described in the Principal Risks section of the prospectus.
