Russell 1000 Value Index	2.14%	7.18%	11.65%

Performance data shown represents past performance and is no guarantee of future results. Current performance may be higher or lower than the performance shown. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed may be worth more or less than their original cost. To obtain the most current month-end performance data, visit us.dimensional.com. Performance includes reinvestment of dividends and other earnings. For ETFs, the market price return is calculated from closing prices as determined by the fund's listing exchange. If you trade your shares at another time, your return may differ.

The portfolio's benchmark is the Russell 1000 Value Index.

PERFORMANCE HIGHLIGHTS Q1 2025

The portfolio returned 2.2% for the quarter, performing in line with the Russell 1000 Value Index. The portfolio's focus on large cap value stocks contributed to relative performance, as deeper value stocks outperformed for the period. Conversely, the portfolio's emphasis on mid cap stocks detracted from relative performance.

Equities were off to a challenging start in the first quarter of 2025, with the S&P 500 returning -4.3% and the so-called "Magnificent 7" trailing the market.¹ Weaker US returns contrasted with the country's recent stock market dominance, and the Russell 3000 lagged the MSCI All Country World ex USA IMI Index by 9.3%. A new administration in Washington commanded global investors' attention, and markets quickly reacted to ongoing threats of tariffs and retaliation. Energy stocks lead in the US while tech stocks like Nvidia and Tesla saw declines. US Inflation remained stubborn in January and February, and FOMC participants revised their 2025 target rate expectations higher. The US premium environment was mixed for the quarter with small caps underperforming large caps and high profitability stocks underperforming low profitability stocks, while value stocks outperformed their growth counterparts overall.

In the US, large cap value stocks returned 2.7%, outperforming large cap growth stocks by nearly 12%. The portfolio held 36% greater weight in these stocks than the index, including names like AT&T, which outperformed the index by over 23%. Conversely, the portfolio's emphasis on mid cap stocks detracted from relative performance.

Market Returns by Relative Price			Portfolio Weight Relative to Russell 1000 Value Index
Large 10-100%			
Value 0-30%	2.7%		+36%
Neutral 30-50%	-7.1%		-8%
Growth 50-100%	-9.2%		-8%

1. Magnificent 7 include Alphabet, Amazon, Apple, Meta, Microsoft, Nvidia, Tesla. Named securities may be held in accounts managed by Dimensional.

Market Returns are computed from Russell 3000 Index published security weights and Dimensional computed security returns. Company size designations are based on total market capitalization in each country or region. Relative price (e.g. Value and Growth) designations are based on price-to-book ratios. Profitability ("Prof") designations are based on operating income before depreciation and amortization minus interest expense, scaled by book. Unless shown, underlying holdings in REITs and Utilities, identified by GICS code, and stocks without size, relative price, or profitability metrics, rights, warrants, cash, cash equivalents, ETFs, and bonds are excluded. Weights are based on month-end averages over the period.

US Large Cap Value ETF

PORTFOLIO STRUCTURE

Dimensional's US Large Cap Value ETF is designed to capture the returns associated with the large cap value premium in the US by investing in stocks within the largest 90% of the US market with relative prices in the lowest 30% when ranked by price to book. Within this universe, the portfolio is designed to target higher-expected-return securities by overweighting mid caps, lower relative price (value) stocks, and stocks with higher profitability. Additionally, the portfolio excludes real estate investment trusts (REITs) from purchase to allow investors to customize their real estate exposure. The strategy also generally excludes highly regulated utilities from purchase because while they generally have low relative prices, their expected returns tend to be lower than those of value stocks. The portfolio uses information in market prices every day to systematically pursue higher expected returns while managing risks and controlling costs.

EQUITY MARKET OVERVIEW *US Market Returns (USD), Q1 2025*

	SIZE	RELATIVE PRICE		PROFITABILITY	
		VALUE	GROWTH	HIGH PROF	LOW PROF
Large	-5.3%	-1.4%	-9.1%	-6.0%	-4.7%
Small	-8.1%	-7.6%	-8.6%	-6.0%	-10.3%
	Small caps underperformed large caps	Value stocks outperformed growth stocks within both large and small caps		High profitability stocks underperformed low profitability stocks within large caps and outperformed within small caps	

Past performance is no guarantee of future results.

Market Returns are computed from Russell 3000 Index published security weights, Dimensional computed security returns and Dimensional classification of securities based on size, value, and profitability parameters. Within the US, Large Cap is defined as approximately the largest 90% of market capitalization in each country or region; Small Cap is approximately the smallest 10%. Within the non-US developed markets, Large Cap is defined as approximately the largest 87.5% of market capitalization in each country or region; Small Cap is approximately the smallest 12.5%. Within emerging markets, Large Cap is defined as approximately the largest 85% of market capitalization in each country or region; Small Cap is approximately the smallest 15%. Designations between value and growth are based on price to book ratios. Value is defined as the 50% of market cap with the lowest price to book ratios by size category and growth is the highest 50%. Profitability is measured as operating income before depreciation and amortization minus interest expense scaled by book. High profitability is defined as the 50% of market cap with the highest profitability by size category and low profitability is the lowest 50%. REITs and utilities, identified by GICS code, and stocks without size, relative price, or profitability metrics are excluded from this analysis. GICS was developed by and is the exclusive property of MSCI and S&P Dow Jones Indices LLC, a division of S&P Global. Countries not in the Dimensional investable universe are excluded from the analysis. Indices are not available for direct investment. Their performance does not reflect the expenses associated with the management of an actual portfolio. ETFs trade like stocks, fluctuate in market value and may trade either at a premium or discount to their net asset value. ETF shares trade at market price and are not individually redeemable with the issuing fund, other than in large share amounts called creation units. ETFs are subject to risk similar to those of stocks, including those regarding short-selling and margin account maintenance. Brokerage commissions and expenses will reduce returns. Fund commentary is based on NAV performance.

Risks include loss of principal and fluctuating value. Investment value will fluctuate, and shares, when redeemed, may be worth more or less than original cost. **Small and micro cap securities** are subject to greater volatility than those in other asset categories. **International and emerging markets** investing involves special risks, such as currency fluctuation and political instability. Investing in emerging markets may accentuate these risks. **Sector-specific investments** focus on a specific segment of the market, which can increase investment risks. **Sustainability funds** use environmental and social screens that may limit investment opportunities for the fund. **Diversification** neither assures a profit nor guarantees against loss in a declining market. **The fund prospectuses contain more information about investment risks.**
