Cash	1.00%	—	—	—

Weighted average fees are calculated by taking the Model weights and underlying fund net expense ratios as published in the most recent prospectus to calculate the model weighted average fee. If a model has a cash component, the fee for that portion of the model is assumed to be 0%. Advisory fees that may be applicable in the management of the Model are not reflected.

Fees shown are as of the most recent prospectus. Certain underlying Dimensional funds have entered into fee waiver and/or expense assumption arrangements with Dimensional. In these cases, Dimensional has contractually agreed, under certain circumstances, to waive certain fees and/or assume certain expenses of the Portfolio. Unless otherwise stated in the prospectus, the fee waiver and/or expense assumption agreement will remain in effect for one year from the date of the prospectus and continue in effect from year to year thereafter unless terminated by a Portfolio or the Advisor. The net expense ratio reflects the total annual fund operating expenses of the Portfolio after taking into account any such fee waiver and/or expense assumption arrangements. Please read the Portfolio's prospectus (available in the Fund Center on [my.dimensional.com](http://my.dimensional.com)) for details and more information.

Prior to listing date, the following ETFs operated as mutual funds: US Core Equity 2 ETF (listing date: June 14, 2021) The NAVs of the predecessor mutual funds are used to compute performance from inception to listing. For ETFs, the market price return is calculated from closing prices as determined by the fund's listing exchange. If you trade your shares at another time, your return may differ. For the period from inception date to listing date, the NAV of each fund is used as a proxy for the market price to calculate returns. ETFs trade like stocks, fluctuate in market value and may trade either at a premium or discount to their net asset value. ETF shares trade at market price and are not individually redeemable with the issuing fund, other than in large share amounts called creation units. ETFs are subject to risk similar to those of stocks, including those regarding short-selling and margin account maintenance. Brokerage commissions and expenses will reduce returns.

## COMPONENT AFTER TAX RETURNS AS OF 03/31/2025

# Dimensional Moderately Conservative ETF TA Model

as of 03/31/2025, in USD

	ANNUALIZED RETURNS			
	1 Year	5 Years	10 Years	Since Inception
US Core Equity 2 ETF	4.38%	18.62%	10.48%	9.02% 10/04/2007
After taxes on distributions	4.06%	18.25%	10.01%	8.59% 10/04/2007
After taxes on distributions and sale of portfolio shares	2.75%	15.10%	8.52%	7.54% 10/04/2007
Russell 3000 Index	7.22%	18.18%	11.80%	9.55% 10/04/2007

After-tax returns are calculated using the highest individual federal income tax rate in effect and they do not reflect state and local taxes. After-tax returns depend on an investor's particular tax situation and may differ from those shown here. Prior to listing date, the following ETFs operated as mutual funds: US Core Equity 2 ETF (listing date: June 14, 2021) The NAVs of the predecessor mutual fund are used for performance from inception to listing.

## IMPORTANT INFORMATION

Performance data shown represents past performance and is no guarantee of future results. Current performance may be higher or lower than the performance shown. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. To obtain the most current month-end performance data, visit [us.dimensional.com](https://us.dimensional.com). Performance includes reinvestment of dividends and other earnings.

Dimensional data provided by Dimensional.

**Risks** include loss of principal and fluctuating value. Investment value will fluctuate, and shares, when redeemed, may be worth more or less than original cost.  
**Small and micro cap securities** are subject to greater volatility than those in other asset categories.  
**International and emerging markets** investing involves special risks, such as currency fluctuation and political instability. Investing in emerging markets may accentuate these risks.  
**Sector-specific investments** focus on a specific segment of the market, which can increase investment risks.  
**Fixed income securities** are subject to increased loss of principal during periods of rising interest rates. Fixed income investments are subject to various other risks, including changes in credit quality, liquidity, prepayments, call risk, and other factors. Municipal securities are subject to the risks of adverse economic and regulatory changes in their issuing states.  
**Real estate investment** risks include changes in real estate values and property taxes, interest rates, cash flow of underlying real estate assets, supply and demand, and the management skill and creditworthiness of the issuer.  
**Sustainability and social funds** use environmental and social screens that may limit investment opportunities for the fund.  
**Commodities** include increased risks, such as political, economic, and currency instability, and may not be suitable for all investors. The portfolio may be more volatile than a diversified fund because the portfolio invests in a smaller number of issuers and commodity sectors.

**Asset Allocation:** Overall equity and fixed income allocations are determined by the model's fund level allocation. Regional breakouts within equity are determined by the underlying securities' country assignments made by Dimensional and Dimensional's country to region assignments.

Profitability is measured as operating income before depreciation and amortization minus interest expense, scaled by book.
