

The Market and Control of US Congress

HYPOTHETICAL GROWTH OF \$1 INVESTED IN THE S&P 500 INDEX
1926–2024

Republican House and Senate Democratic House and Senate Mixed Control

Nearly a century of US stock market returns suggests that making investment decisions based on control of the chambers of Congress is unlikely to lead to better financial outcomes.

- From 1926 to 2024, stocks trended higher regardless of whether Democrats or Republicans controlled the House and the Senate, or whether control was mixed.
- Actions by Congress may impact returns, but other factors like geopolitical events, interest rate changes, and technological advances do too.
- Shareholders invest in companies, which focus on serving their customers and growing their businesses, regardless of what happens in Washington.

Stocks tend to reward disciplined investors no matter who has the upper hand in the House and Senate.
